

MUHAMMAD ZAEEM ALTAF

FULL-STACK DEVELOPER

official.zaeemaltaf@gmail.com | [+92 309 7521007](tel:+923097521007) | muhammadzaemaltaf.vercel.app | linkedin.com/in/muhammadzaemaltaf

SUMMARY

Full-stack developer specializing in Next.js, React, TypeScript, Laravel, and Tailwind CSS, with growing expertise in agentic AI development using the OpenAI Agents SDK and MCP (Model Context Protocol). Builds fast, responsive, scalable web applications with clean APIs, robust data models, and polished interactive UIs. Currently pursuing a Bachelor's in Computer Science and training as a Cloud Applied Generative AI Engineer.

WORK EXPERIENCE

Full Stack Developer, Innovative Widget Oct 2024 - Present

- Design, develop, and deploy full-stack web applications for client projects using Next.js and Laravel.

PROJECTS

LEXNIS SOS – ADMIN PANEL

Role: Frontend Developer — built the Next.js interface, integrated backend APIs, ensured cross-device usability.

- Built real-time SOS lifecycle tracking (SENT, RESPONDED, PENDING_APPROVAL, RESOLVED) over native WebSocket, with a live notification channel for alerts, area updates, and admin queries.
- Developed shift scheduling that auto-adds/removes officers from area group chats on shift start/completion, and a service-request lifecycle (pending/in-progress/completed/cancelled).
- Built an SOS analytics dashboard with trend charts, area-wise breakdown, response-time distribution, and KPI cards; added S3-backed CSV exports with database fallback storage.

Stack: Next.js, Tailwind CSS, TypeScript

RECROT

Role: Full-Stack Developer — built frontend and backend: Firebase data layer, authentication, rate limiting, and notification systems.

- Built job application lifecycle tracking across company dashboards, with tiered subscription plans enforcing monthly application caps and usage warnings.
- Automated subscription expiry via daily cron jobs plus real-time client-side checks, backed by Redis sliding-window rate limiting on notification endpoints.
- Implemented email 2FA with one-time codes and backup codes on session-cookie-based auth, plus Firebase Cloud Messaging push notifications with delivery-failure handling.

Stack: Next.js, Tailwind CSS, TypeScript, Firebase

VAULTSNEAKS (Personal Project) vaultsneaks.vercel.app

Role: Sole Developer — full-stack build: frontend (Tailwind CSS, Shadcn UI), backend (Next.js), content via Sanity.

- Built a Sanity-driven catalog (products, categories, star-rated reviews) with admin-controlled user access.
- Implemented dynamic Stripe Checkout sessions with live currency conversion (USD/CAD/GBP/AUD/INR) and webhook reconciliation (signature verification, duplicate-order prevention).
- Implemented 4 independent persisted Zustand stores (basket, wishlist, compare, user) and GROQ-powered product search across name, description, and category.

Stack: Next.js, Tailwind CSS, Sanity, Stripe, TypeScript

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, PHP
Frameworks & Libraries: React.js, Next.js, Tailwind CSS, Zustand, Shadcn UI, Laravel, Express.js, Node.js, Bootstrap, jQuery
Database: MySQL, MongoDB, PostgreSQL
CMS: WordPress, Sanity.io
AI Agents & Tooling: OpenAI Agents SDK, MCP, Laravel AI SDK
Tools & Platforms: Vercel, GSAP, Framer Motion, Git/GitHub, Groq

EDUCATION

Bachelor of Science in Computer Science Feb 2024 – Ongoing
Virtual University of Pakistan (VU)

CERTIFICATIONS

Certified Cloud Applied Generative AI Engineer Feb 2024 – Ongoing
Governor Sindh Initiative for GenAI, Web3, and Metaverse (GIAIC) — TypeScript, Next.js, Python, AI
Web Engineering (E-Commerce) 2024
National Vocational and Technical Training Commission (NAVTTTC)
